

4 Days Galapagos Short Island Hopping

Day 1: The Galapagos Islands.

Arrival and Transfer In

Welcome to the Galapagos Islands. Your guide will meet you at the airport where you will take a shuttle to the end of Baltra Island to take a ferry to Santa Cruz. Once at Santa Cruz another shuttle will be waiting to take you to visit the highlands.

In the highlands, Giant Tortoises can be seen in their natural habitat. While visiting this area you will be at a ranch where lunch will be provided. Afterwards, the shuttle will take you to the Charles Darwin Research Station.

The Charles Darwin Research Station is one of the most important sites for visitors. It is a research facility that has an extensive collection of Galapagos plant life specimens carefully preserved and also acts as a biological research station and active breeding center operated by the Charles Darwin Foundation. Their biggest conservation efforts are to one day eliminate all invasive and non-native plants and animals destroying endemic species within the islands.

After the visit to the Research Station, you will be brought to the Red Mangrove Eco Luxury Hotel. Enjoy the rest of the afternoon/evening at the hotel in your accommodation and the services provided at the hotel.

(Meals: Lunch and Dinner)

Days 2 & 3: Day Tours

Important Note: During days 2 and 3 of your program you will visit the various islands described below. The specific islands and visitor sites you will visit will be confirmed with your guide before you are picked up in the morning for the day tour. Each morning you will be picked up at the hotel by your guide. The island visits are not specified beforehand due to changing availability and climate conditions.

(Meals: Breakfast, lunch, and dinner)

BARTHOLOMEW ISLAND

Bartholomew is an island surrounded by turquoise waters and beautiful beaches. It will take about 2 hours to arrive by boat. Upon arrival, the tour begins by climbing the boardwalk and staircase. When you reach the top you will see a spectacular landscape. Sullivan Bay and the famous Pinnacle Rock can be seen clearly from here.

The island is a now extinct volcano with a variety of red, orange, green, black and shiny volcanic formations. This is the perfect place to observe Galapagos penguins. Moreover, you can snorkel with sea turtles, sharks, white-tip reef sharks, tropical fish, sea lions and many other unique marine species. After lunch, you will visit Sullivan Bay. Here you can see some amazing lava formations, the product of a volcanic eruption in 1903. This is an excellent example of the typical forms and colors that contrast with older types of lava.

Also, take into account that Bartholomew Island is a breeding ground for green sea turtles. They come to the shores of the island to nest through the months of January and March every year. The tour on the island will end at approximately 5:00 pm and you will be transferred back to the hotel.

SANTA FE ISLAND

Santa Fe is one of the central islands in Galapagos surrounded by an incredible turquoise bay and usually hosts a large colony of sea lions. The island is protected by a natural barrier of rocks where sea lions like to gather. It will take about 40 minutes of navigation on the ocean to arrive by boat. When landing at the site you will discover a beautiful sandy beach, if you are lucky a colony of sea lions will be resting and enjoying the sun when you arrive!

Following the guide on one of the paths, you may find one of the endemic land iguanas found only on this island, the Santa Fe Iguana. Their main foods are the leaves and fruits of the large and thick cactuses, Palo Santo, which are also endemic to the island and are one of the major attractions. Crabs, night herons, sea iguanas, mockingbirds, and doves are seen frequently in this area. After the walk, lunch will be served on the boat. Afterwards, you'll have the opportunity to do some snorkeling. The bay is excellent for practicing this activity and is perfect to find species such as sea tortoises and stingrays. The tour ends at approximately 5:00 pm.

At this time you'll take a boat back to Santa Cruz, roughly 40 minutes and then you'll be transferred back to the Red Mangrove.

NORTH SEYMOUR / BACHAS BEACH

You'll be picked up at the hotel and transferred to the Itabaca Channel to board the yacht that will take you to North Seymour Island. This place is great for hiking. There is a circular path about 2 miles long that crosses the interior of the island and allows you to explore the rocky coastal path. On this trail, you will be able to discover some of the largest seabird colonies in the Galapagos Islands.

Furthermore, you will have the opportunity to observe the nesting sites of blue-footed boobies and the bright and colorful frigatebirds that are visible throughout the year. These two species represent one of the biggest attractions of Galapagos. The male frigates inflate their red chest when they try to attract or draw attention to the females. These birds are also well known to steal food from the blue-footed boobies, and other bird species for that matter. Additionally, you cannot miss the funny ritual dance performed by the blue-footed boobies in order to win over a female mate, or how they find the perfect pebble and place it by the females feet as a gift.

After lunch, we will go snorkeling and hopefully find sea turtles, Galapagos sharks, and perhaps there will be sea lions playing around in the surf along the shore. After a few hours of this activity, we will visit Bachas Beach. At this beach, you can choose to rest and/or swim in the wonderful Galapagos waters. Tour will end at approximately 5:00 pm. Once more you will be transferred back to the Red Mangrove hotel afterward.

PLAZAS ISLAND / CARRIÓN POINT

After about 2 hours of navigation, you will finally arrive at Plazas Island. The first attraction to be seen are large colonies of sea lions. Then, just a few meters from the dock, a group of land iguanas can almost always be observed. The trail your guide will take you on goes through to the other side of the island, which is very small and rectangular. You will walk along a ravine sharing the path with land iguanas, some marine iguanas, and birds such as blue-footed and Nazca boobies, swallow-tailed gulls and tropical birds. Apart from this, frigatebirds and pelicans can be found within the area. Lunch will be served onboard the vessel.

Despite its small size, this island is the home of a large number of species. It is famous for its extraordinary flora, including attractive and beautiful trees and cactuses where a large colony of Galapagos land iguanas live. Therefore, this island is very popular among local and foreign visitors. Depending on the season, the vegetation will change its color from bright green in the rainy season to orange and purple in the dry season. You cannot miss this spectacular landscape! The tour will end at approximately 5:00 pm. Afterwards, you'll be transferred to the hotel.

BAY TOUR + TORTUGA BAY BEACH

The bay tour, also known in Spanish as "Tour de Bahía", is a must do in the Galapagos. This tour combines snorkeling, hiking, learning more about the islands and a bit of relaxing too. During the tour, you will visit fascinating spots like the "Lobería" and "Las Grietas".

Las grietas is an amazing place to visit on Santa Cruz where you can snorkel in naturally made crevasses. You'll be surprised at how many different species you can see below the surface in these clear pools.

Tortuga Bay is a beautiful white and powdery beach that seems to go on forever. Walking to the beach takes about 45 minutes at a leisurely pace. The very well paved path takes you through an Opuntia and Candelabra cactus forest. Watch your step as the many lava lizards that live here scatter around. Keep your eyes peeled for wild giant tortoises living in the forest as well. The forest is also home to numerous Darwin finches, mockingbirds, and yellow warblers. As you enter the white sandy beach, you will have a chance to observe different marine species like stingrays and baby reef sharks in the shallow waters of the beach. There may even be a few marine iguanas coming in and out of the water. At the end of the beach is a large mangrove ecosystem. Continue walking to this area for a totally different type of beach to find more stingrays, fish, sharks, sea turtles and pelicans diving for their dinners. Along the small cliffs, you can see blue-footed boobies along the sides. A short boat ride of about 20 minutes takes you back to the Puerto Ayora Pier.

DAY 4: TRANSFER OUT.

After a complete breakfast at the Red Mangrove, you will be transferred to the ferry that will take you back to Baltra airport for your flight back to mainland Ecuador.

(Meals: Breakfast)

The Price of the program is in US dollars, per person in DBL occupancy:

Room Category	1 pax	2 pax	3 - 5 pax	6 - 9 pax	10 - 16 pax	SGL Room Supplement (per pax) Rack Rates
Standard	\$4,445	\$3,122	\$2,896	\$2,723	\$2,614	\$437
Superior	\$4,564	\$3,176	\$2,953	\$2,779	\$2,668	\$500
Suite	\$5,750	\$3,712	\$3,487	\$3,314	\$3,205	\$1,146

The price of the program includes:

- Transfers in / out and to / from Baltra airport.
- Visits as specified within itinerary.
- Bilingual guide English / Spanish.
- All meals
- Transportation throughout program.
- Accommodation for 3 nights at Red Mangrove Eco Luxury Hotel (breakfast included).
- Snorkeling equipment for daily tours (face mask and snorkel).

The price of the program does not include:

- Galapagos flight ticket.
- Entrance to the GPS National Park (\$ 100).

- Ingala Transit Card (\$ 20).
- Lunch on the 4th day
- Drinks and alcoholic beverages.
- Tips and personal expenses.
- Activities and services not specified within itinerary.

IMPORTANT NOTES:
